

Ergonomics is the science of fitting the work task to the physical and psychological capabilities of the worker. Ergonomists evaluate risk factors involved in work-related tasks and design work practice, process, and equipment changes that relieve stressors. Colden provides ergonomics services across a wide range of work environments, from industrial settings to office spaces. Our approach involves employees at all levels and includes injury review, identification of risk factors, design modification, and training.

Controlling cumulative trauma disorders and other injuries to back, knee, neck, and extremities has proven to lower costs associated with workers compensation premiums, as well as the indirect costs of replacing lost employees. Additionally, reducing the discomfort associated with work can increase morale and productivity.

Colden's Services

- Ergonomic assessment strategy development
- Ergonomic risk assessments
- Workstation evaluations
- Job design and tool evaluation
- Ergonomics program development and gap assessments
- Ergonomics training and education
- Quantifying biomechanical factors

A close-up, angled view of a blue computer keyboard, showing several keys like 'V', 'J', 'O', 'P', 'N', and 'L'. The keyboard is partially obscured by a white curved shape that frames the text above it.
